I am an over the road owner/operator & have been for 44 yrs and have seen many new issues come before congress, etc. but seemingly none of these issues are to benefit the trucker. It seems as though they are out to hinder the trucker in anyway they can, we are working people just like anyone else, with alot more expense & responsibility than most. I have XM radio in my semi, pickup & home, which now I consider my radios a very important piece of equipment, both for information on weather & road info. There has been times when the info that I got on my XM has saved me delays on road construction, accidents, etc. & I could take an alternate route. I drive year round, therefore, weather information in the areas that I'm going to is vital. I get alot better info on these topics on my XM, than I do on regular radio. I pay for these services & I use the daily, therefore I don't think the FCC or anyone else should be able to dictate what I can listen to. I ask you to oppose HR 4026 & thank you for your time
